

# **EF Scale stakeholders history and future directions**

James LaDue EF Scale town-hall forum,

03 Feb 2014

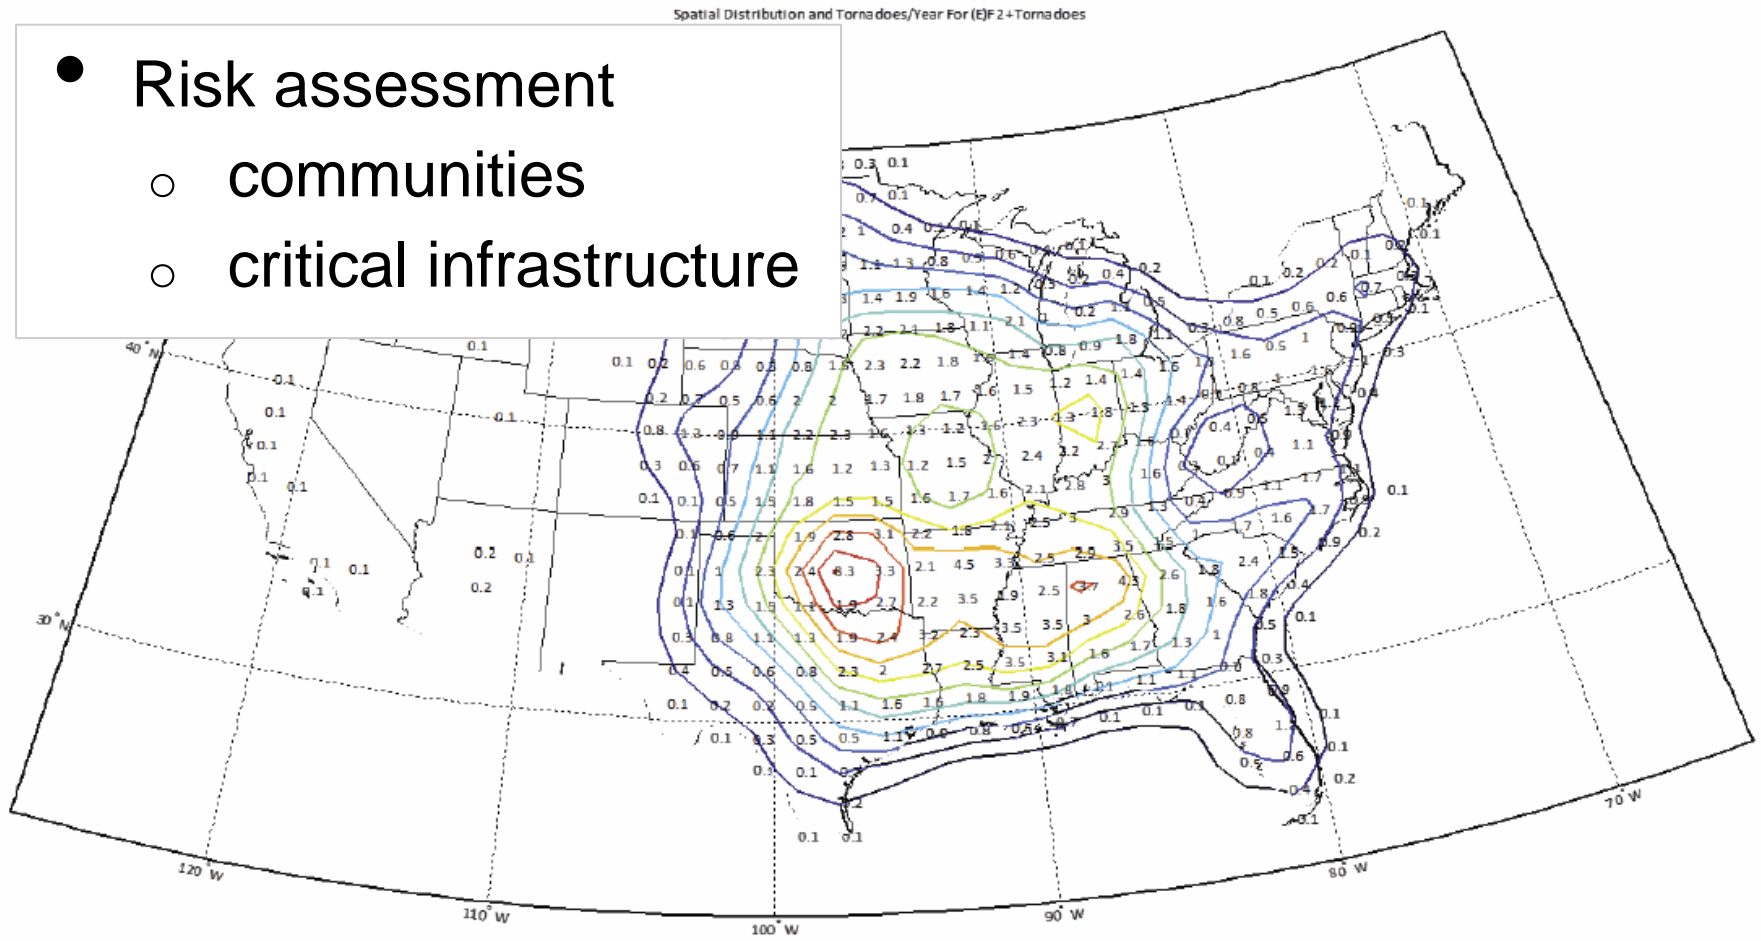

Atlanta, GA

# outline

- The need for scales for tornadoes
- history of EF scale development
- EF scale application and initial assessment
- EF scale stakeholders group - who are the users
  - Stakeholders represented
- Desires for changes in the EF scale
  - publications include (NWS service assessments, FEMA 2011, NIST 2013, BAMS 2012)
- New techniques rapidly developed
- Constraints and policies

# The need for tornado intensity estimation

- Risk assessment
  - communities
  - critical infrastructure

Data Source: NOAA. Analysis by NIST.

Figure 2- 33. Probability density of EF-2 or greater tornadoes from 1980 through 2011 with EF-2 or stronger tornadoes per year values shown at each grid point.

# The need for tornado intensity estimation

Improved forecasts and warnings

Adapted from Smith et al. (2013)

# EF-scale implemented in 2007

## Purpose:

- A six-level numerical, damage-based classification of estimated wind speeds
- 28 damage indicators (DIs)
- Multiple degrees of damage (DOD) for each DI

Sources:

[A recommendation for an enhanced Fujita scale](#)  
[AMS glossary](#),

# EF Scale applied to notable events

First tornado (EF3): Lady Lakes, FL 2007 Feb 02

First EF4 tornado: Bluemound, KS 2007 Feb 28

Enterprise, AL EF4: 2007 Mar 01

First EF5 tornado: Greensburg, KS 2007 May 04

Largest outbreak: Superoutbreak of 2011 Apr 27

Deadliest tornado: Joplin 2011 May 22

The controversial El Reno tornado of 2013 May 31

The EF Scale improved damage surveying in these events.

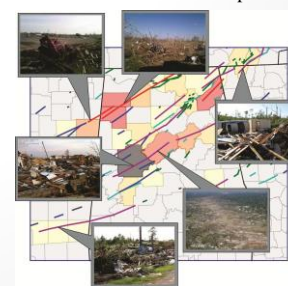

These events also exposed the EF scale to new concerns

A4: Enterprise High School, Science Wing

The Historic Tornadoes of April 2011

# Concerns with present EF-scale

2013: Bull. Amer. Meteor. Soc., 94, 641–653.

Incorrect vegetation DIs, need for new DIs  
Lack of guidance for current DIs

## TORNADO INTENSITY ESTIMATION

Past, Present, and Future

BY ROGER EDWARDS, JAMES G. LADUE, JOHN T. FERREE, KEVIN SCHARFENBERG,  
CHRIS MAIER, AND WILLIAM L. COULBOURNE

The enhanced Fujita scale, devised to rate wind damage more precisely, will need accountability and flexibility to keep pace with advances in mapping, documentation, and the growing understanding of structural responses to airflow.

Mitigation Assessment Team Report

### Spring 2011 Tornadoes: April 25-28 and May 22

Building Performance Observations,  
Recommendations, and Technical Guidance

FEMA P-908 / May 2012

- #40 - DI lists incomplete
  - #41 – DOD categories inadequate
  - #42 – gradient of DODs
  - #43 – Incorrect order of DODs
  - #44 – lacking photographic DOD guidance
- Differences between NWS and FEMA

Finding 7: Lacking adequate DIs and DODs

Draft Final Report • National Institute of Standards and Technology (NIST)

### Technical Investigation of the May 22, 2011, Tornado in Joplin, Missouri

# We need a process to evolve the EF scale

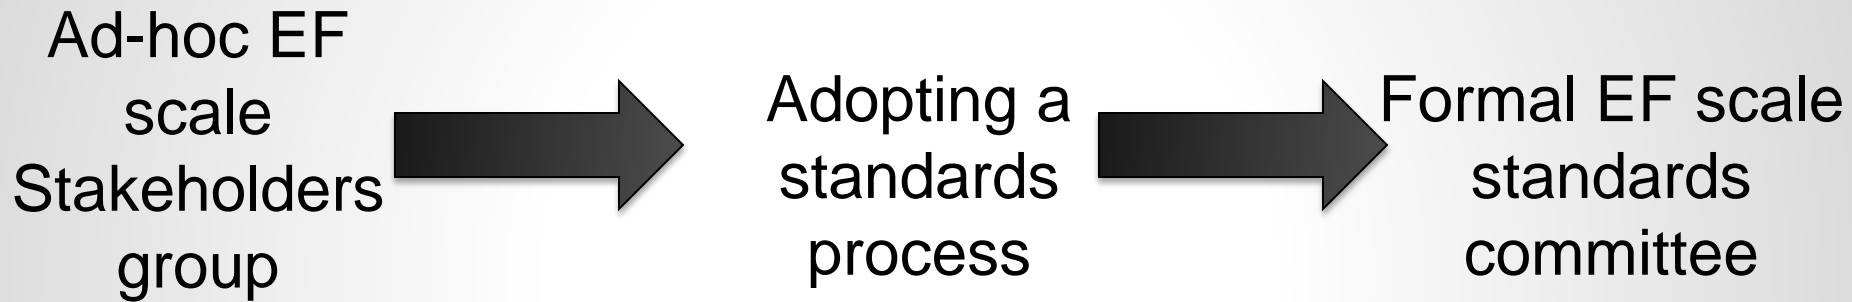

## NIST Recommendation 4

Develop a committee to propose, accept, implement improvements

# A path to a formal process

Proposed affiliation

## TORNADO INTENSITY ESTIMATION

Past, Present, and Future

BY ROGER EDWARDS, JAMES G. LADUE, JOHN T. FERREE, KEVIN SCHARFENBERG,  
CHRIS MAIER, AND WILLIAM L. COULBOURNE

The enhanced Fujita scale, devised to rate wind damage more precisely, will need accountability and flexibility to keep pace with advances in mapping, documentation, and the growing understanding of structural responses to airflow.

# A path to improving the EF scale

Potential ideas for improvement to

- Current and future DIs
- DODs
- Wind speed thresholds
- Better guidance

What about alternate methods?

# Acknowledging major users' requirements

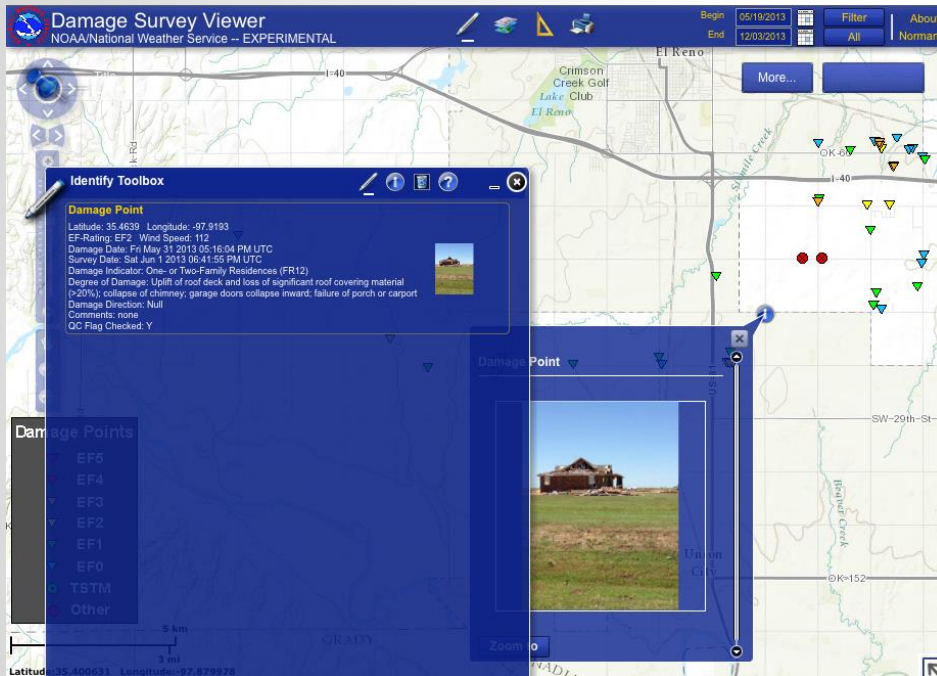

## NWS needs

### Preserve EF scale method

- Damage-based wind speed estimates
- 'Consistent' application NWS-wide

### Implication:

- EF scale and EF scale method are as one
- New methods external to EF scale

# Alternate methods

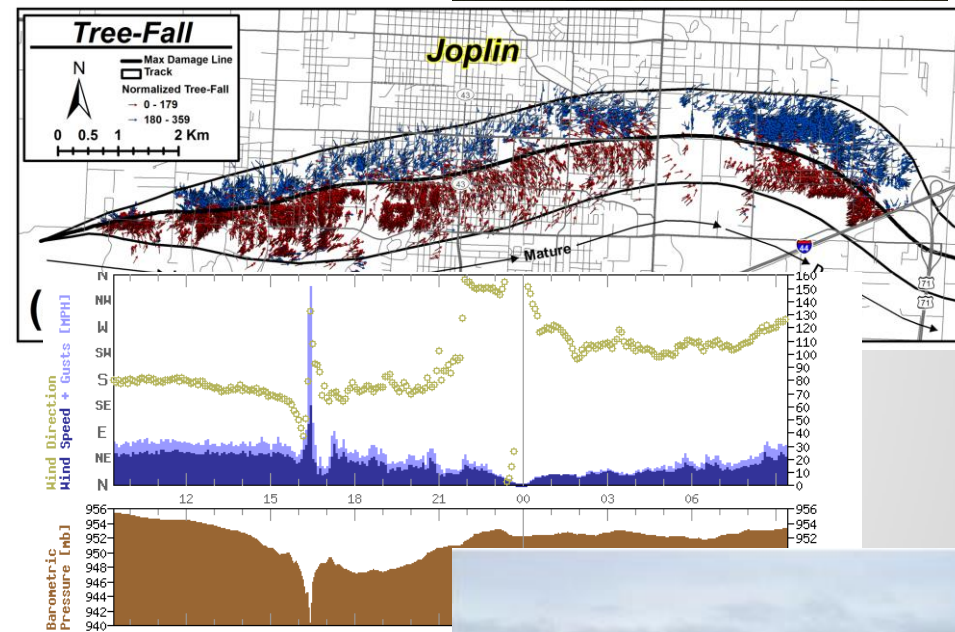

Radar,

Tree-fall patterns,

In-situ anemometry,

Forensic engineering,

and others

# Questions

- How do we incorporate new methods while acknowledging NWS and other agency requirements?

# Panel discussions

## 1<sup>st</sup> panel

- Discuss current state and issues of the EF scale

## 2<sup>nd</sup> panel

- Discussion on ways to improve the EF scale and new methods
